

Unified Messaging Software

ALL YOUR MESSAGES— E-MAIL, FAX AND VOICE MAIL— AVAILABLE ANYWHERE

When you're traveling or away from the office, Eclipse Unified Messaging Software provides a single contact point for all your important messages. You can get all your messages in one call by connecting to your e-mail server. Long distance expenses are minimized because you make just one call to get all your messages.

Designed to run on a Windows NT server, Eclipse Unified Messaging Software combines all your messages—e-mail, fax and voice mail—in a single, centralized mail management program. Your messages are converted to standard file formats so you can see, access and process them through a variety of devices. You can also improve productivity by sending and receiving faxes with your desktop PC.

IN OTHER WORDS...

The Eclipse Unified Messaging Software combines all your messages—e-mail, fax and voice mail—in standard file formats so they are easily available from anywhere through a variety of devices.

Unified Messaging Software

FEATURES

- Combines e-mail, fax and voice mail in a single mail management program
- Send and receive faxes with your desktop PC

BENEFITS

- Single contact point for all your important messages
- Three levels of email integration allow you to choose what's right for you:

Level 1: Standard Unified Messaging

Voice mail messages are converted to waveform (.WAV) files and received as attachments. Using a multi-media PC, voice messages may be saved or forwarded to other users. This level supports all popular email protocols such as MAPI VIM and SMTP/POP3.

Level 2: Expands Voice Messaging Options

Rather than being converted into .WAV file attachments, voice messages simply appear as an email notification. Users can simply click "play" and have the message streamed real-time over a multi-media PC or desktop phone. New voice messages can be sent directly from your PC to entire email group lists or mailboxes.

Level 3: Adds Outbound Faxing

The software converts your desktop PC to a virtual fax server, providing inbound faxes to, and outbound faxing from the desktop.
